

The Bridge Write Up

DUE MARCH 26!!!

- When creating your individual write up, you may choose one of three options:
 1. Regular written write up
 2. Make a slide show
 3. Make a movie
- The Regular Written Write up
 - Write one paragraph explaining what happens during an earthquake and why this affects structures like buildings and bridges.
 - Why did you choose the materials and bridge design your group used? Write one or two paragraphs explaining what features of your bridge will make it more able to withstand an earthquake and your reasoning.
 - Using the scientific method, explain in at least 2 paragraphs the process from start to finish that your group used while making your bridge. Include any tests your group performed, any changes you made and why you made them.
 - Include all drawings, plans, and scratch work. Drawings should include at minimum, two drawings of your bridge from different views. If you made separate parts and then put them together you should include multiple views of each piece. Include everything, mistakes and things you changed included.
 - Daily Record. This is the journal you will keep every day you work on this bridge. It should include everything your group
